DRILLSTEM ADVERTISING OPPORTUNITIES

The Drillstem is a quarterly publication of CWWCA sent to all active members of the association published in March, June, September and December.

Classified ads are \$1.00 per 3.5-inch line.

Help wanted ads will not be published. Seeking employment ads will be published.

Print Ads Pricing Qty:	1	2	3	4
Savings for Multiple Issues	0%	5%	10%	15%
Full Page 7"x10"	\$250	\$475	\$675	\$850
Half Page 7"x5" or 3.5"x10"	\$150	\$285	\$405	\$510
Qtr Page 3.5"x5" or 7"x2.5"	\$90	\$172	\$243	\$306
Business card 3.5"x2"	\$50	\$95	\$135	\$170

Artwork must be camera ready at the dimensions listed above in these formats - PDF, PNG, JPG, TIFF. If using JPG, make sure density is 600dpi to avoid pixilation. For full formatting requirements, please visit our website at CWWCA.org.

Deadlines for content: February 1st, May 1st, August 1st, November 1st

WEBSITE ADVERTISING OPPORTUNITIES

BANNER ADS
One Year: \$100

Banner advertisements are displayed on the CWWCA website. The advertisements rotate sequentially, so every ad will have equal display time.

Banner ads should be 285 pixels wide x 96 pixels high, .jpg format and in landscape orientation.

(If the advertiser is a CWWCA member, this fee also includes a free upgrade of your member directory listing - see below)

MEMBER DIRECTORY UPGRADE
One Year: \$50

Upgrade your CWWCA member listing in the searchable member directory including your contact information. Link to your website and include your logo or picture.

Pictures for the listing should be submitted in .jpg format and should be 225 pixels wide, by 150 pixels high.

CWWCA President's Report - 4th Quarter

Hello everyone,

Another year has come and gone. I have no idea where this year has gone. It seems we are still feeling the effects of the pandemic in ways we probably never foresaw. Running a business in our industry has certainly been a challenge the last several years. I hope everyone is still able to find success. Despite the challenges, it seems like business is as good as ever if not better. Time will tell.

As I write this, the midterm election has come and gone but I have yet to hear any definitive results. I'm still waiting to get some positive leadership in this country to get things moving back in the right direction. It may take a while for things to get back to normal, if they ever do. We have been forced to adapt to the current environment and hopefully we can continue to do it successfully.

The board of directors met recently and unfortunately I was not able to attend. Despite my absence, it looks like the program committee has put together a good program for the conference in January. I hope everyone has a chance to make it, and for those who rarely get to go, I hope to see you there. I would encourage everyone to come to the conferences with fresh ideas about what you would like to see at future conferences. The program committee does a great job of putting these together, but it would be a lot easier with more input from the membership.

I don't have much else to report. Hope everyone has a good holiday season and I hope to see you in January.

Thanks,

Gene Wagner

THE RIGHT SOLUTION, EVERY TIME

PUMPS • MOTORS • CONTROLS

Mitchell's offers an assortment of quality products and the technical expertise to help you select and size the right components or packaged system for your next project. Mitchell's innovative team of engineers design for efficiency and build to meet your unique requirements.

From 4" submersible pumps and motors to vertical turbines to centrifugal jet pumps, customers depend on Mitchell's quick response time to deliver results. Our trucks are always on the move to meet your needs.

Mitchell's is a national distributor of pumps, motors, and controls from quality brands including: **Goulds, Myers, Barnes, Keen, Landia, Danfoss and more!**

Legislative Update - October 22, 2022

Prepared by Richard Brown

Update on Likely Legislation for 2023

In just over 2 months, the General Assembly will convene. It is not unusual for bills to be introduced on the very first day and most certainly over the next several days. This session will see a bit of a phased introduction of bills because of the large number of freshmen legislators who will emerge from the November election. In the House, there will be at an absolute minimum 25 new freshmen elected. That is more than 1/3 of the 65 members and the freshmen will come from both parties. If an incumbent representative is defeated in November, the number of freshmen will increase.

For logistical purposes, the legislature operates on calendar deadlines. Since we have a constitutionally limited session, much work must be accomplished before day 1. To meet the maximum 120 consecutive calendar days, as many bills as possible must be introduced and assigned to committees as soon as the session is convened.

For returning legislators, each of them must have requested 3 of their 5 allocated bills not later than November 29. For the newly elected members, 3 of their 5 bills must be requested not later than December 13. Within this protocol, there is another deadline for bills. One of the 3 prefiled bills must be filed with the clerk of the chamber into which it will be introduced by January 4 – a full 5 days before the session begins. This requirement is logistical so that the bills may be printed, distributed to the committee staff, referred to the fiscal note office for analysis and preparation by the chamber clerk for formal introduction on the day of convening. That means that about 100 bills will be in the process of being introduced on January 9.

During the time that a bill is being drafted by Legislative Legal Services, it is considered a product subject to attorney-client relations. Such bills are not revealed to the public unless the sponsors specifically release them. It is not uncommon for sponsors to have a limited release to persons whose input is requested before finalization of the official bill.

Known Bills

The interim committees completed their work earlier in the fall and determined which bills they wanted to recommend for introduction. Following the committee action, the recommendations went to the Legislative Council which is the joint bipartisan leadership committee. Legislative Council met on October 14 to consider the requested bills and to vote on which ones would be approved. As a technical note, a bill that emerged from an interim committee and was approved by Legislative Council does not count against the 5 bill allocation for a legislator. That legislator may sponsor an interim bill and 5 other bills.

DRILLER AND/OR PUMP INSTALLER APPRENTICESHIP PROGRAM

The Colorado Water Well Contractors Association Apprenticeship Program is a voluntary program for CWWCA members, developed to assist individuals that would like to obtain a water well driller license and/or a pump installation license in the state of Colorado. Records will be kept by the CWWCA and available to the applicant to provide proof of experience to the Board of Examiners (BOE) during the license application process.

By the end of each year of apprenticeship the apprentice must attain two continuing education hours. At the end of the apprenticeship, the apprentice must comply with the existing rules for continuing education as set forth in the BOE Rules 2 CCR 402-14 concerning continuing education to obtain a driller's and/or pump installer's license. A Continuing Education Form (similar to the one provided to the licensed contractors by the State during the renewal process each year) will be provided to the apprentice at the end of each calendar year so the CE's earned can be documented.

For full information on this and other CWWCA educational opportunities, go to cwwca.org and look under education.

Based on the approval by Legislative Council, we know that the following bills will be introduced on the first day of the session:

Water Resources and Agriculture Review Committee:

The WRARC met over the summer and requested 11 bills to be drafted for review. After the bills were drafted, the members of the committee withdrew 9 of the 11. Only 2 were advanced from the WRARC to Legislative Council.

Bill A: Establish a Task Force on High-altitude water storage:

The bill proposes to create a 7 person task force to consider high-altitude water storage.

The 7 members along with their respective appointing authorities are:

- The State Engineer or the State Engineer's designee;
- A state representative to be appointed by the Speaker of the House;
- A state senator to be appointed by the President of the Senate;
- A member to represent the ski industry to be appointed by the House Minority Leader;
- A member to represent the Colorado whitewater rafting industry to be appointed by the Senate Minority Leader;
- A member who is an engineer with expert knowledge of and experience with high-altitude hydrology to be appointed by the Speaker of the House of Representatives; and,
- A member who represents the US Forest Service to be appointed by the House Minority Leader.

The appointing authorities are to make their respective appointments within 30 days of the bill becoming effective. Additionally, the President of the Senate is to appoint one of the 7 members to be the chair of the task force.

The bill sets forth several issues that the task force would be required to study. All are related to the feasibility of using snowmaking to increase high-altitude water storage. The bill is a bit vague on the storage issue. While it identifies the use of reservoirs or even small scale ponds, it does not rule out simply using an enhanced snowpack as a type of storage. It has long been recognized that the natural snowpack has served as the state's largest water reservoir that provides runoff water to the various streams. Conspicuous by its absence is any review of the effect that increasing temperatures, loss of natural shading from wildfire affected forests and earlier melt out might have on the value of enhanced high-altitude snowmaking for storage purposes.

In addition to the issues the task force is to review, the bill sets forth some further tasks that are to be completed.

COLORADO SPRINGS (719) 572-5251 ♦ 5610 PARACHUTE CIRCLE

WesternHydro.com

The bill raises some pragmatic questions. It is not clear why the CWCB or the Interbasin Compact Committee could not undertake this type of study rather than creating a special task force with extremely narrow perspectives. It would seem that either entity could accomplish such a study without having a new state law to commission it.

It is not clear why the task force would be composed of these few and specifically identified interests. There is no representative of the irrigated agriculture sector and it would seem that the irrigators would have a significant interest in high-altitude water storage whether in reservoirs or in an enhanced snowpack. Which then raises the questions as to what the water from an enhanced snowpack could be used for and how would it interface with the Doctrine of Prior Appropriation? The absence of a member of the task force with expertise in Colorado water law begins to loom large. Would the use of the water from an incrementally increased snowpack that is not recognized within the Doctrine of Prior Appropriation be nothing more than an out-of-priority diversion subject to the regulatory action of the State Engineer?

The bill does not include a definition of "high-altitude". Would that be areas above timberline? Would it be above 8,000 feet? Would it vary by watershed and river basin?

The bill is silent with respect to the interface with existing snowmaking.

The bill is silent with respect to the potential for utilizing existing high-altitude storage – whether that be natural lakes or human constructed reservoirs.

As approved by the WRARC, the bill would be introduced into the House under the prime sponsorship of Rep. Hugh McKean and prime co-sponsor Rep. Barbara McLachlan. The presumptive Senate sponsors would be Senator Jeff Bridges as the Senate sponsor and Senator Cleave Simpson as the Senate co-sponsor.

Bill B: Permanent Status of Water Resources & Agriculture Review Committee:

The WRARC has been a standing interim committee for many years. As both water and agriculture have become higher and higher profile policy matters, the WRARC has recommended that the charge of the committee be changed from an interim committee to a committee that may meet at any time during the year – including during a legislative session. As the bill was referred from the WRARC committee, it would be required to meet at least 4 times during a calendar year, it would remove the limitation on the number of field trips the committee may engage in, and it repeals obsolete language in the underlying statute.

The bill would be introduced into the Senate under the prime sponsorship of Senator Cleave Simpson along with Senator Jeff Bridges as the prime co-sponsor. The House sponsors would be Rep. Barbara McLachlan as the House sponsor and Rep. Hugh McKean as the co-sponsor.

Attendees: Mike Pacheco, Travis Day, John O'Brien, Joe Meigs, Kevin Donegan, Andy Flor, Tom Harder, Brad Himes, Doug Stephenson, Josh Weaver, John Shuler, Scott Hall

Moderator: John Shuler

DWR Update

Well permitting activity during the third quarter of 2022 was lower than the same period in 2021, as shown in the summaries attached. Those summaries show, relative to the third quarter of 2021, a 15% decrease in permit applications, an 11% decrease in permits issued and a 9% decrease in exempt permits issued.

Well Inspection Program

The well inspection program continues to operate with two well inspectors and remains limited in both budget and personnel. Inspectors continue to focus on high-risk wells, mostly on the Front Range.

DWR Forms

Progress on eForms slowed recently while DWR filled a vacant Google specialist position. The Change in Ownership eForm is now available for use on the DWR website. The Notice of Intent to Construct Monitoring Hole(s) will be the next eForm to be completed.

The DWR reports a recurring issue with title companies completing the wrong forms on behalf of homeowners. One contractor pointed out that licensed contractors, who are likely more in tune to the needs of a well owner, are not allowed to complete forms without a signed affidavit from the customer. Title companies are not held to the same standard.

GRUNDFOS 

Policy and Rule Revisions

Water Well Construction Rules

The water well construction rules were last revised in September 2016. The DWR plans to revise the rules in 2023 and is compiling a list of potential rule changes generated both internally by the DWR and through contractor input. DWR staff suggests rule revisions and those revisions are presented to the BOE for review. The DWR will make that list public after the next BOE meeting on November 14th.

The DWR noted a disconnect between the BOE and contractors during the last rule-making period and would like to avoid that scenario during this rule-making period. The last revision took approximately 2.5 years to complete but the DWR hopes the upcoming revision process will be completed in less than a year. Contractors should get involved early in the process and there will be a stakeholder meeting at the Annual Conference to discuss potential rule changes.

The DWR would like to simplify the Type I aquifer rules. Violations of the current Type I rules occur most frequently along the Front Range. A common issue is improper grouting of wells penetrating multiple aquifers. The proposed rule changes could also increase required annular size.

Nontributary Rulemaking

The DWR terminated the rulemaking process for nontributary groundwater on April 15th, 2021. On June 22nd, 2022 Judge Taylor ruled in favor of the State, confirming that nontributary wells are subject to volumetric limits based on a 100-year aquifer lifespan. Rulemaking will resume after resolution of the case.

Division 6 Over-Appropriation

The DWR issued a policy that the Yampa River basin is over-appropriated upstream from the Little Snake River and Yampa River confluence. This change will result in denial of “fee well” permit applications that are not included in a plan for augmentation or Substitute Water Supply Plan. If a well owner can demonstrate that a well and its uses existed prior to March 1, 2022, the DWR will accept applications to permit those existing wells and evaluate the applications without treating their impacts as injurious through December 31, 2022.

GWS-32 Filings

Some contractors are concerned about the burden of Pump Installation and Production Equipment Test Report (GWS-32) submittals for pump replacements. It is unclear whether the DWR uses the information contained in the GWS-32 submittals and how that information is helpful for protection of water quality. The DWR may try to streamline the GWS-32 submittal process upon creation of the GWS-32 eForm.

WATER CISTERN & FIRE PROTECTION WATER STORAGE

Unlicensed Contractors

Members remain concerned about work performed by unlicensed contractors. The DWR's definition of an unlicensed contractor includes anyone not licensed by the BOE including both pop-up outfits and individuals working outside of their licensed authority. The DWR requires proof of completion of unlicensed work. Contractors generate the bulk of complaints about unlicensed contractors. After the DWR confirms a valid complaint, they send a cease-and-desist letter to the unlicensed party then transfer the case to the Attorney General's office.

The DWR reports that unlicensed activity is highest in the southeastern part of the state. Well inspectors do not frequent that area, which makes it harder to identify unlicensed contractors. The local Water Commissioners may be able to assist with documentation of unlicensed work.

GFI Breakers and NEC 2020

A contractor reported that a county electrical inspector recently required GFI circuit breakers on 240V circuits including well and booster pump controls, consistent with the national standards. However, some VFD systems will not operate on GFI circuits. Few other contractors reported having a similar issue, but the TWG plans to gather more information and investigate the potential for a GFI exemption for VFD controls. One contractor suggested that a line and load filter may help address the issue.

CGWA

The CGWA is currently holding hybrid monthly meetings and elected a new Board of Directors in May. CGWA meetings are approved for 1 hour of CE credit for licensed water well contractors.

Board of Examiners Meeting Recap
November 14, 2022
Respectfully Submitted by John O'Brien

Sweeping Rule Changes for Well Drilling May Be Coming!

The staff and the Board of Examiners are currently looking at making multiple rule changes. Some of these proposed rules may directly change how wells are constructed. They have not made a red line of the rules public yet as they want our feedback as contractor first. They are having a stake holder meeting at our annual conference this year to open up the discussion of what they want to do to see what our take on it is. They are doing all of this prior to the BOE opening up the Rules for changes which seems almost inevitable. I encourage all of you to attend the stake holder meeting and the BOE meetings from this point forward, during this process, to ensure your voice is heard. Stating your view once at one meeting is not enough; you must get involve if you want to be heard. A couple of these proposed rules, that were brought to the B.O.E. on the November 14th meeting, are listed below. Keep in mind that there are lots more changes being looked at; during this process the staff has had several private meetings bring up ideas and possible solution to Issue they see.

1. Definition of "Admirative Defined Aquifer"
2. 1 ½ inch annular space from the widest point on the casing coupler.
3. All Type one single aquifer wells outside of Denver basin grouted to surface.
(Possibly no PVC just steel)

Lesion report

Construction Rule Changes

The B.O.E has not opened up the rules for change yet but from listening to the discussions, I believe they will, and there will be some big changes proposed. I encourage all of you to attend the stake holder meeting and the BOE meetings from this point forward, during this process to ensure your voice is heard. Stating your view once at one meeting is not enough, you must get involve if you want to be heard

Well Inspection

The Chief Well Inspector is retiring and the last B.O.E meeting was his last. Doug Stephenson will continue on with the state until December 31st of 2022. We would like to thank Doug for his service to our industry. His practical knowledge has led to positive rule enforcement. We can only hope that his replacement will be as knowledgeable and fair-minded as Doug has been.

Approved Additives

The well inspectors have noticed Calcium Chloride on several drill rigs and they brought it to the B.O.E. to get it as an approved additive for your grout to accelerate the set time. The B.O.E has approved it.

One-Pass Gallery Wells

The staff wants to be authorized to approve variances waving the continuous on-site supervision for the OnePass-gallery wells. The B.O.E responded with a no and stated that they would not likely do a special meeting to approve the variance and the contractors would have to wait until the scheduled meeting. Basically, their failure to plan does not constitute an emergency.

Continuing Education

During COVID-19, the state made a policy for all people to get all 8 hours of C.E's on line as we could not meet in person. The Policy has now gone back to 4 hours online and 4 hours in person for 2023.

2022 CWWCA MEMBERSHIP RENEWAL

It is that time of year to consider your membership with CWWCA. Your membership dues are essential to keeping CWWCA funded for those in our industry. **YOUR EXISTING MEMBERSHIP EXPIRES ON DECEMBER 31!**

Why your membership matters:

Information: CWWCA keeps you informed of new industry and regulatory issues through the quarterly Drillstem and email updates.

Education: CWWCA's Annual and Mid-year conferences provide Colorado-focused classes on drilling and pump technology, geology, safety, business and regulatory compliance.

Advocacy: CWWCA interacts with State representatives and State staff on issues important to the water well industry making sure that issues important to our industry are lobbied.

Networking: CWWCA provides a single point network to the important vendors providing materials and services to our industry, as well as a great conduit to keep in touch with your fellow drilling and pump contractors.

Members also get discount registration to all CWWCA Events!

We have two easy options to renew. Complete the application on the adjacent page and mail in with a check or you can visit our website at <http://cwwca.org/> to update your membership dues.

Please return your remittance and completed membership form to:

Safety First: First Aid Kits

By: Gene Wagner EMT-P and Licensed Pump Installation Contractor

This is a repeat of an article I wrote 5 years ago, but I feel it is worth repeating. Some new information has also been added. *First Aid Kits*, we all have them. We may not know where they are or what's in them but we know we've seen one around. Maybe we kick it around in the pickup or stuffed it behind or under the seat. The latch is broke so we throw a wrap of electrical tape around it to keep the contents from spilling out. Or we have one in the shop buried on some shelf under a bunch of boxes or books. When it's time to use it we have to think where we saw it last. Then we have to dig it out, unwrap the tape and hope what we need is in there. The point I am trying to make here is that the First Aid Kit should not be an afterthought.

As an employer, it is your responsibility to make sure your employees stay safe and if something happens we need to make sure they have the tools to take care of the emergency. As an employee, it is their responsibility to know what is in the kit and how to use it.

Most commercial kits have everything needed to take care of a minor injury. I would recommend carrying the smaller kits in the vehicles and a larger, more diverse kit should be kept in the shop. The main thing to remember is if something is used out of the kit it should be replaced in a timely fashion. Kits will vary somewhat in their contents but all kits will have the essentials to take care of a minor emergency. Contents typically include: Assorted band aids, 2"x2" and 3"x3" sterile gauze dressings, 5"x9" trauma dressing, roller bandages, emergency blanket, instant cold compress, butterfly wound closures, finger splints and first aid tape. Most kits also come with aspirin and ibuprofen, alcohol wipes, nitrile gloves and first aid cream. The kit will probably have some form of first aid guide with the kit. Some things that may not be included with the kit, that I would recommend, are baby aspirin for chest pain, Benadryl for allergic reactions, eye wash, a Sam splint and a triangular bandage for large dressings or to be used as a sling. I recommend the baby aspirin for the chest pain because it is much more palatable when chewed.

First aid kits should be adapted to your specific needs. One thing that we carry in each of our pickups is a decontamination kit, in case of an exposure to pesticides. We are constantly going into corn fields that may have been sprayed with some kind of pesticide or insecticide. Most customers are good about letting us know if a field has been sprayed but it's best to be prepared if one slips through the cracks. We had an incident where one of our crews was pulling an irrigation pump when they were sprayed by a spray plane. The plane obviously knew they had done something wrong because they left the area and we were never able to determine who it was or what they sprayed the crew with. One member of the crew was hospitalized for 3 days and never did return to work. It is best to be prepared.

You will want to go through your kits and compare the contents to what you feel your need is and make modifications as necessary. We recommend that our employees go through their kits regularly to make sure they have everything that may be needed. With a little luck, you will continue to kick them around and never need to use them. Remember in a major emergency to contact 911 and seek professional help.

Thank you and stay safe.
